In Korea's turbulent sixteenth century, the fate of Joseon, the great Korean dynasty, rests on the shoulders of its heir to the throne, Prince Yeongjo. The king's new, young, minister of the royal government – a young man with an insatiable appetite for power, women, and war – may be in danger of fatally compromising his coronation, while at the same time a coterie of jealous, scheming courtiers and ambitious generals are preying on him. Into this storm-laden scene comes an army of brigands from the North, a ragtag army of settlers from the Manchuria frontier, and of warlord generals, intent on crushing the opposing courts and securing their own ambitions. - Korea, around 1592 AD Like pretty much everyone else who has ever played Age of Empires, Age of Attrition is surely a look back in time at a simpler time with more depth than modern real time strategy titles. It is a game that has many similarities to the other games in the series, and is particularly similar to Age of Empires: Age of Kings. The similarities are not all that surprising, as both of these games are based off the original Age of Empires game, with only the name changed (to reflect the fact that Attrition is the first game in the series without Age of Kings). Age of Attrition is a real time strategy game, with the player controlling a faction with thousands of soldiers. The player begins with very few resources and the goal is to build up a huge army and conquer the other factions to the borders and beyond. While many of the mechanics are similar to the other games in the series, there are a few key differences. The most noticeable difference to the original game is that the game does not have a campaign. Rather, the game is more akin to a sandbox game, where the player can play the game as he or she likes. The player gets to choose what countries to conquer, or which ones to ignore, and how to build his or her cities. The country selection is made up of the countries already present in the game, countries from the original game, plus new options that can be selected for expansion. The other difference is that the game is much more focused on combat. In this game, the player attacks the enemy base by landing his or her armies in an attack on a specific strategic area. This creates a vortex that makes it very easy for the player to attack the enemy base by flying
